

Listing of Claims:

1. (Currently Amended) A mobile information terminal apparatus comprising:

a first body;

a second body pivotably ~~supported on~~ coupled to the first

body; and

an image display section ~~having~~ comprising: (i) an image display device which displays an image, (ii) a magnifying optical part which magnifies the image displayed by the image display device, and (iii) an observation window which ~~is provided on a~~ projects from a side of one surface of the first body and leads the image magnified by the magnifying optical part to the outside, wherein the second body ~~pivoting~~ pivots in a range between: (a) a closed position in which the second body partially covers ~~the~~ said one surface of the first body so that the observation window is visible from the outside without obstruction by the second body, and (b) an opened position in which the second body ~~has~~ is at an angle to the first body; ~~wherein the mobile information terminal apparatus comprises:~~

an operation section provided on the first body;

a display section which is provided on the second body and has lower resolution than ~~one~~ a resolution of the image display device; and

at least one pointing device to operate at least the image displayed by the image display device,

25 wherein the at least one pointing device and the observation window of the image display section ~~being~~ are disposed so as to face toward the outside when the second body is in the closed position.

2. (Original) The apparatus according to claim 1, wherein the image display section is built in at least one of the first body and the second body.

a
cont 3. (Original) The apparatus according to claim 1, wherein the image display section is detachably supported in at least one of the first body and the second body.

4. (Currently Amended) The apparatus according to claim 1, wherein the first body ~~has~~ includes:

5 a front surface which is included in ~~the~~ said one surface of the first body and covered by the second body when the second body is in the closed position, and

 a back surface located on ~~the~~ a side of the first body opposite the front surface, and

wherein the at least one pointing device ~~is~~ includes a pointing device disposed on the back surface of the first body.

5. (Currently Amended) The apparatus according to claim 1,
wherein the second body ~~has~~ includes:

a front surface which opposes the first body when the second
body is in the closed position, and

5 a back surface located on ~~the~~ a side of the second
body opposite the front surface, and

wherein the at least one pointing device ~~is~~ includes a
pointing device disposed on the back surface of the second body.

a
6. (Currently Amended) The apparatus according to claim 1,
wherein the second body ~~has~~ comprises:

a front surface which opposes the first body when the second
body is in the closed position; and

5 a back surface located on ~~the~~ a side of the second
body opposite the front surface, and

wherein the pointing device ~~has~~ comprises:

a main operation member to operate at least ~~on~~ the
image which is displayed by the image display device;

10 a subordinate operation member disposed on the back
surface of the second body; and

a connecting member which connects the subordinate
operation member and the main operation member ~~to each other, and~~

wherein the main operation member and the subordinate operation
15 member are interlocked ~~with each other~~.

7. (Currently Amended) The apparatus according to claim 1,
wherein the first body ~~has~~ comprises:

a front surface which is included in ~~the~~ said one surface of
the first body and covered by the second body when the second
5 body is in the closed position;

a back surface located on ~~the~~ a side of the first body
opposite the front surface; and

 a side surface extending between the back surface and the
front surface,

10 wherein the second body ~~has~~ comprises:

a front surface which opposes the first body when the
second body is in the closed position;

a back surface located on ~~the~~ a side of the second
body opposite the front surface; and

15 a side surface extending between the back surface and
the front surface, and

wherein the pointing device is disposed on one of the side
surface of the first body ~~or~~ and on the side surface of
the second body.

8. (Currently Amended) The apparatus according to claim 1,
wherein:

the first body ~~has~~ comprises a front surface which is
included in ~~the~~ said one surface of the first body and covered by
5 the second body when the second body is in the closed position,

the second body ~~has~~ comprises a front surface opposite to
the first body when the second body is in the closed position,
and a back surface located on ~~the~~ a side of the second
body opposite the front surface,

10 the observation window ~~is provided on~~ projects from the
front surface of the first body,

a
an opening which goes through the second body from the front
surface to the back surface is provided in a part of the second
body which opposes the observation window when the second body is
15 in the closed position, and

the observation window faces toward the outside from the
opening when the second body is in the closed position.

9. (Currently Amended) The apparatus according to claim 1,
wherein the magnifying optical part ~~has~~ comprises a free shaped
surface optical device.

10. (Currently Amended) The apparatus according to claim 1, wherein the magnifying optical part ~~has~~ comprises a free shaped surface prism.

11. (Currently Amended) A mobile information terminal apparatus comprising:

a first body;

a second body pivotably ~~supported on~~ coupled to the first
5 body; ~~and~~

a! an image display section ~~having~~ comprising: (i) an image display device which displays an image, (ii) a magnifying optical part which magnifies the image displayed by the image display device, and (iii) an observation window which ~~is provided on a~~
10 projects from a side of one surface of the first body and leads the image magnified by the magnifying optical part to the outside, wherein the second body ~~pivoting~~ pivots in a range between: (a) a closed position in which the second body partially covers ~~the~~ said one surface of the first body so that the
15 observation window is visible from the outside without obstruction by the second body, and (b) an opened position in which the second body ~~has~~ is at an angle to the first body; ~~7~~
~~wherein the mobile information terminal apparatus comprises:~~

an operation section provided on the second body;

20 a display section which is provided on the first body and
has lower resolution than ~~one~~ a resolution of the image display
device; and

at least one pointing device to operate at least the image
displayed by the image display device,

25 wherein the at least one pointing device and the observation
window of the image display section ~~being~~ are disposed so as to
face toward the outside when the second body is in the closed
position.

a
12. (Original) The apparatus according to claim 11,
wherein the image display section is built in at least one of the
first body and the second body.

13. (Original) The apparatus according to claim 11,
wherein the image display section is detachably supported in at
least one of the first body and the second body.

14. (Currently Amended) The apparatus according to
claim 11, wherein the first body ~~has~~ includes:

a front surface which is included in ~~the~~ said one surface of
the first body and covered by the second body when the second
5 body is in the closed position, and

a back surface located on ~~the~~ a side of the first
body opposite the front surface, and

wherein the at least one pointing device ~~is~~ includes a
pointing device disposed on the back surface of the first body.

15. (Currently Amended) The apparatus according to
claim 11, wherein the second body ~~has~~ includes:

a front surface which opposes the first body when the second
body is in the closed position, and

5 a back surface located on ~~the~~ a side of the second
body opposite the front surface, and

a wherein the at least one pointing device ~~is~~ includes a
pointing device disposed on the back surface of the second body.

16. (Currently Amended) The apparatus according to
claim 11, wherein the first body ~~has~~ comprises:

a front surface which is included in ~~the~~ said one surface of
the first body and covered by the second body when the second
5 body is in the closed position; and

a back surface located on ~~the~~ a side of the first body
opposite the front surface, and

wherein the pointing device ~~has~~ comprises:

a main operation member to operate at least ~~on~~ the
10 image which is displayed by the image display device;

a subordinate operation member disposed on the back surface of the first body; and

a connecting member which connects the subordinate operation member and the main operation member ~~to each other, and~~
15 wherein the main operation member and the subordinate operation member are interlocked ~~with each other.~~

17. (Currently Amended) The apparatus according to claim 11, wherein the first body ~~has~~ comprises:

a front surface which is included in ~~the~~ said one surface of the first body and covered by the second body when the second
5 body is in the closed position;

a a back surface located on ~~the~~ a side of the first body opposite the front surface; and

a side surface extending between the back surface and the front surface,

10 wherein the second body ~~has~~ comprises:

a front surface which opposes the first body when the second body is in the closed position;

a back surface located on ~~the~~ a side of the second body opposite the front surface; and

15 a side surface extending between the back surface and the front surface, and

wherein the at least one pointing device pointing device ~~is~~
includes a pointing device disposed on one of the side surface of
the first body ~~or~~ and on the side surface of the second body.

18. (Currently Amended) The apparatus according to
claim 11, wherein:

said one surface of the first body ~~has~~ comprises a front
surface which is covered by the second body when the second body
5 is in the closed position,

the second body ~~has~~ comprises a front surface opposite to
the first body when the second body is in the closed position,
and a back surface located on ~~the~~ a side of the second body
opposite the front surface,

10 the observation window ~~is provided on~~ projects from the
front surface of the first body,

an opening which goes through the second body from the front
surface to the back surface is provided in a part of the second
body which opposes the observation window when the second body is
15 in the closed position, and

the observation window faces toward the outside from the
opening when the second body is in the closed position.

19. (Currently Amended) The apparatus according to claim 11, wherein the magnifying optical part ~~has~~ comprises a free shaped surface optical device.

20. (Currently Amended) The apparatus according to claim 11, wherein the magnifying optical part ~~has~~ comprises a free shaped surface prism.

21. (New) A mobile information terminal apparatus comprising:

a first body;

a second body pivotably supported on the first body; and

5
a
an image display section comprising: (i) an image display device which displays an image, (ii) a magnifying optical part which magnifies the image displayed by the image display device, and (iii) an observation window which projects from a side of one surface of the first body and leads the image magnified by the
10 magnifying optical part to the outside, wherein the second body pivots in a range between: (a) a closed position in which the second body partially covers said one surface of the first body so that the observation window is visible from the outside without obstruction by the second body, and (b) an opened
15 position in which the second body is at an angle to the first body; and

at least one pointing device to operate at least the image displayed by the image display device;

wherein the at least one pointing device and the observation window of the image display section are disposed so as to face toward the outside when the second body is in the closed position.

22. (New) A mobile information terminal apparatus comprising:

a first body;

an image display section comprising: (i) an image display device which displays an image, (ii) a magnifying optical part which magnifies the image displayed by the image display device, (iii) an observation projection projected from a surface of the first body and covering the magnifying optical part, and (iv) an observation window which is provided on a projected surface of the observation projection to project from the surface of the first body and lead the image magnified by the magnifying optical part to the outside;

a second body pivotably supported on the first body so as to pivot in a range between: (a) a closed position in which the second body partially covers the surface of the first body so

that the observation window is visible from the outside without obstruction by the second body, and (b) an opened position in which the second body is at an angle to the first body; and

at least one pointing device to operate at least the image
20 displayed by the image display device;

Al
amali wherein the at least one pointing device and the observation window of the image display section are disposed so as to face toward the outside when the second body is in the closed position.
